

MERIDIAN

Treasury analytics for funds that hold assets onchain.

Seed round · \$4M · September 2026

THE PROBLEM

Funds hold assets onchain. They still account for them by hand.

A \$50M crypto treasury is typically spread across 40+ contracts on 6 chains. There is no statement, no custodian report, and no agreed price. Month-end close is a spreadsheet, a block explorer and an analyst working until midnight.

“We found a 400k discrepancy three weeks after quarter end. Nobody could tell me which position it came from.” — CFO, \$180M digital-asset fund

9

days to close the month

\$2.3B

lost to liquidations in 2025

Three things changed in eighteen months.

01

Capital arrived

Tokenised treasuries went from \$0.8B to \$14B. The money onchain is now institutional, and institutional money brings auditors.

02

Regulation landed

MiCA reporting obligations took effect across the EU in 2025. «We hold it in a spreadsheet» stopped being an acceptable answer.

03

Complexity exploded

The average fund now touches 6 chains and 14 protocols — up from 2 and 4 in 2023. Manual reconciliation does not scale past that.

One console. Every position. One honest number.

Reconcile

Indexes 14 chains and 60 protocols into a single position table, priced at block level. No wallet connection, no keys, read-only by design.

Attribute

Splits returns into fees, emissions, price and funding — showing which strategies earn and which are subsidised by a token that is bleeding.

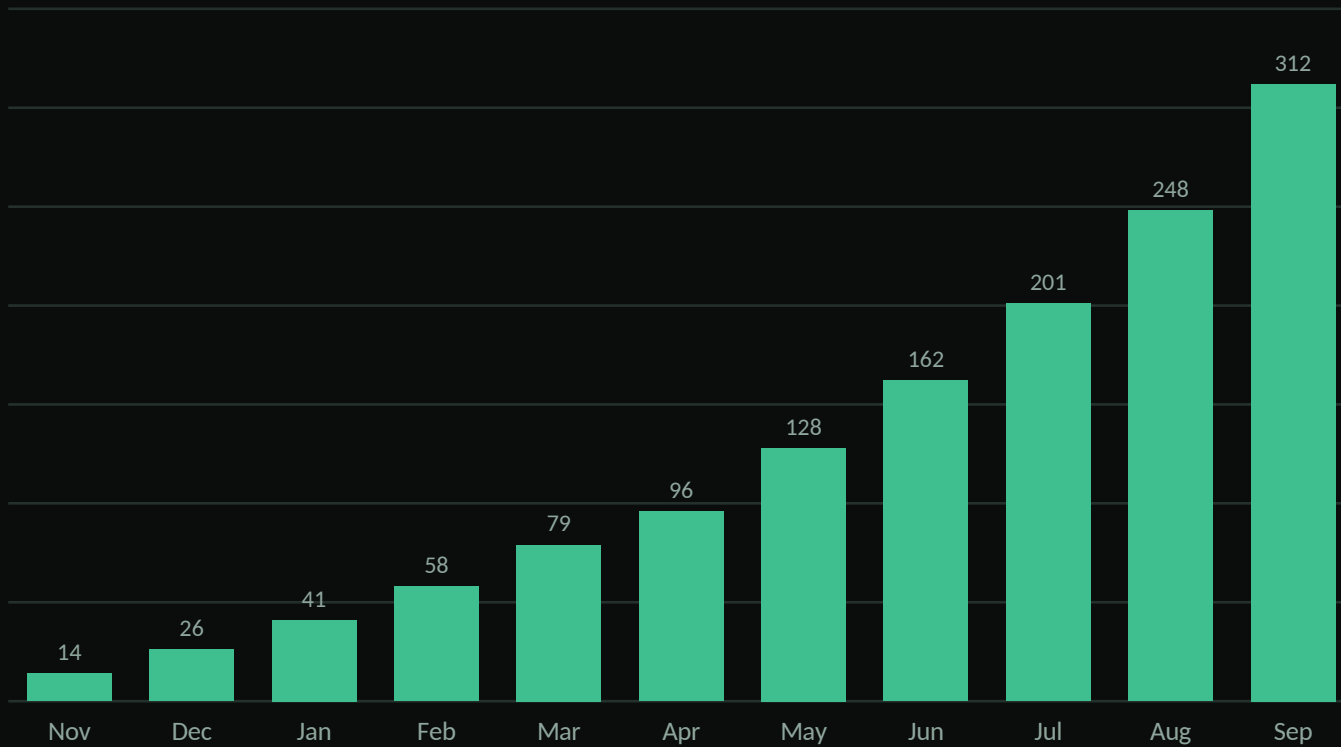

Protect

Stress-tests every leveraged position and alerts Slack before the health factor, not after the liquidation.

Time to first reconciled report: 20 minutes from an address list. No integration work, no engineering time from the customer.

Nineteen paying funds, eleven months in.

■ Family offices & RIAs

Priced per treasury, not per seat.

Observer

Free

up to \$1M tracked

- 3 wallets, 4 chains
- Daily reconciliation
- CSV export

Desk

\$1,400

per month · up to \$50M

- Unlimited wallets, 14 chains
- Block-level pricing
- Full risk engine + alerts
- Xero & signed attestations

Institution

Custom

\$50M+ · multi-entity

- Entity consolidation
- Custom adapters
- SSO, SOC 2, DPA
- On-call risk analyst

Average contract value \$17.0k · gross margin 87% · net revenue retention 128% · CAC payback 7 months

Everyone indexes. Almost nobody attributes.

	Indexing depth	Yield attribution	Risk engine	Audit exports
Portfolio trackers	Good	None	None	Weak
Crypto accounting suites	Weak	None	None	Strong
In-house data teams	Varies	Partial	Partial	Varies
Meridian	Strong	Strong	Strong	Strong

The moat is the adapter library: 60 protocol integrations, each maintained through upgrades. That is eleven months of work a competitor cannot buy.

TEAM

Built by people who had this problem first.

Elena Kavadia

Co-founder & CEO

Eight years in fund operations, last four running middle office for a \$600M digital-asset fund. Closed the books she is now automating.

Marek Rousek

Co-founder & CTO

Built the indexing layer at a top-five block explorer. Holds the record for the fastest reorg recovery on that team, which is a sentence only engineers enjoy.

Tomas Nowak

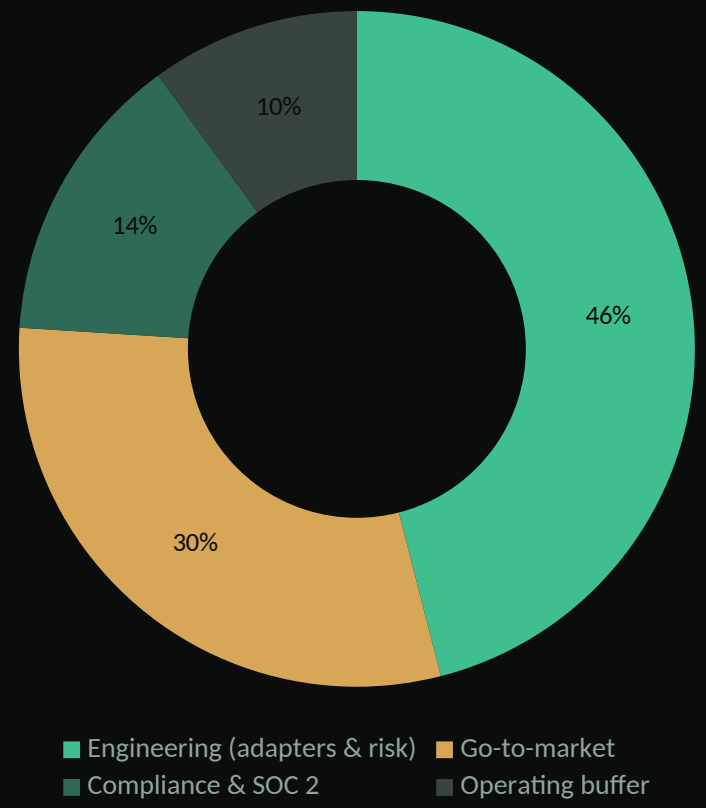

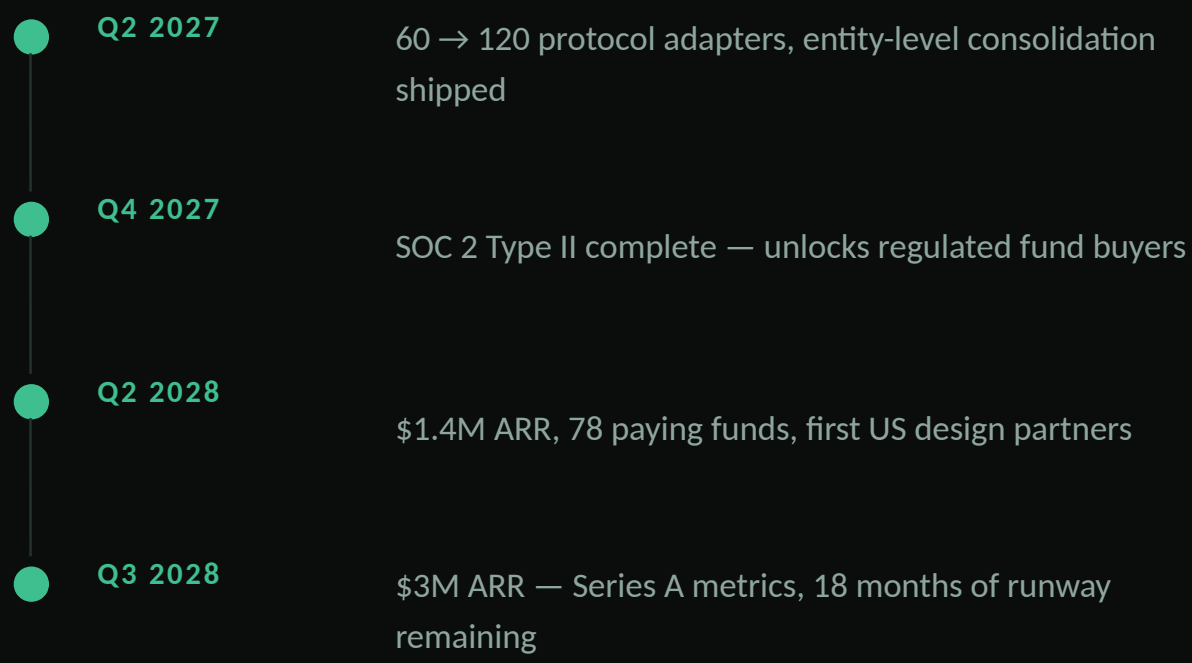

Head of Risk

Ex-clearing house risk modelling. Designed the margin logic behind our stress engine.

Nine people in total · Athens and Prague · advised by the former COO of a European crypto custodian

THE ASK

\$4M seed to reach \$3M ARR in twenty-four months.

Onchain assets are not going back into a spreadsheet.
